

Shop by Concern Page

React.js implementation specification using the same Greenfuel visual system as the Homepage, Shop, About Us and Product Detail pages.

Client Principle

Customers think in concerns - not only in product categories.

Page Goal

Help users discover suitable Greenfuel products through a calm, concern-first browsing experience without AI or medical diagnosis.

*Temporary visual rule: use any suitable dummy image from the local **assets** folder for now wherever final concern, botanical, lifestyle or product imagery is missing. Do not download unrelated external stock images. Keep all asset paths easy to replace.*

GREENFUEL[Shop](#)[Shop by Concern](#)[Ingredients](#)[About Us](#)[Knowledge Centre](#)

Begin With What Your Skin & Hair Need

Explore Greenfuel by concern - then discover the products and ingredients connected to it.

Skin Brightening

Hair Fall

Pigmentation

Anti-Ageing

Hydration

Dandruff

Body Odour

Dry Skin

Sensitive Skin

Dark Circles

SELECTED CONCERN STORY

Concern -> Greenfuel approach -> ingredients -> matching products

MATCHING PRODUCTS

Render only real mapped products

BOTANICAL INTELLIGENCE

Relevant ingredients from real product data

Knowledge Centre support + Greenfuel Promise + Footer

1. Page Objective

The Shop by Concern page should be a premium discovery layer between the user's need and the Greenfuel catalogue. It is not a diagnosis tool and it does not require AI. The visitor chooses a concern, reads a short Greenfuel-oriented explanation, sees relevant ingredients and products, and can continue directly to a product detail page or the filtered Shop page.

- Keep the same warm ivory, matte sand, deep forest green, copper, olive and charcoal design language used across the rest of the Greenfuel site.
- Use editorial whitespace, serif headings, minimal sans-serif supporting text, thin borders and restrained botanical details.
- Do not turn the page into a clinical skin-analysis interface.
- Do not use the AI Advisor or selfie analysis.
- Do not state medical diagnoses, treatment claims, guaranteed improvement, or timelines.
- Do not invent product-to-concern relationships. The backend/JSON must explicitly map products to concerns.
- Do not invent concern-specific clinical evidence. Only render references when approved data exists.

Recommended routes

`/shop-by-concern`

`/shop-by-concern/:concernSlug` (recommended for deep links and SEO)

Alternative: keep one page and store the selected concern in the query string, e.g. `/shop-by-concern?concern=hair-fall`.

Confirmed concern list

Skin	Hair	Body
Skin Brightening	Hair Fall	Body Odour
Pigmentation	Dandruff	
Anti-Ageing		
Hydration		
Dry Skin		
Sensitive Skin		
Dark Circles		

2. Exact Shop by Concern Page Layout

Section 1 - Compact Editorial Hero

Use a shorter hero than the homepage. The user should reach the concerns quickly.

- Eyebrow: SHOP BY CONCERN
- Heading option: Begin With What Your Skin & Hair Need
- Supporting copy: Explore Greenfuel by concern, then discover the products, ingredients and rituals connected to it.
- Visual: one calm Indian lifestyle/botanical image with natural skin/hair and warm light.
- Use a suitable dummy image from the assets folder for now.
- No discount banner, no AI quiz, no medical-analysis UI.

Section 2 - Concern Explorer

Display all ten confirmed concerns as the main visual navigation.

- Skin Brightening
- Hair Fall
- Pigmentation
- Anti-Ageing
- Hydration
- Dandruff
- Body Odour
- Dry Skin
- Sensitive Skin
- Dark Circles
- Desktop: 5 cards first row + 5 cards second row, or a clean 5-column grid.
- Mobile: 2-column grid or horizontal swipe rail.
- Each card: concern title, calm supporting visual/icon, Explore arrow.
- Do not use before/after faces inside concern cards.

Section 3 - Selected Concern Story

When a concern is selected, introduce it with a short editorial Greenfuel explanation.

- Use a dynamic heading such as 'A Greenfuel Approach to Hair Fall' or 'A Greenfuel Approach to Hydration'.
- The text should explain Greenfuel's ritual/product approach, not diagnose the user's condition.
- Use one large botanical/lifestyle composition beside the copy.
- Optional small link: Learn about this concern in the Knowledge Centre - only when an article exists.
- Concern-specific wording should come from content/JSON/admin data.

Section 4 - Concern to Ingredient Journey

Connect the selected concern to Greenfuel's ingredient philosophy.

- Show only ingredients genuinely mapped to products associated with the selected concern.
- Possible fields: common name, botanical name, traditional significance, modern formulation role.
- Ingredient cards link to Ingredient Library / Digital Herbarium pages when available.
- Do not imply an ingredient treats a medical condition unless compliant, approved content exists.
- Use a deep forest-green editorial background to match the Botanical Intelligence sections elsewhere.

Section 5 - Products for This Concern

This is the key commerce section and must use real product mapping.

- Show the matching Greenfuel products in a premium 3-column desktop grid.
- Cards should reuse the Shop page ProductCard component.
- Product image, category, exact name, price, wishlist and Add to Cart use existing backend logic.
- No fake ratings or review counts.
- If no product is mapped, show a graceful empty state instead of inventing recommendations.
- Provide View All Products / Return to Shop as a fallback.

Section 6 - How Greenfuel Thinks About Rituals

Add brand philosophy without duplicating the full About page.

- Use a short Tradition x Science composition.
- Explain that Greenfuel combines Ayurvedic inspiration and modern formulation for contemporary routines.
- Keep this section generic across concerns unless approved concern-specific content exists.
- Use split botanical/lab visual language consistent with the homepage and About page.

Section 7 - Suggested Ritual Placement

A light rule-based routine section can help users understand where matching products fit.

- Possible labels: Morning, Night, Weekly, As Needed.
- Only show placements explicitly stored in product data.
- This is not AI and does not infer a personalized treatment plan.
- Use connected cards or a horizontal ritual timeline.
- Clicking a product leads to its PDP.

Section 8 - Knowledge Centre Support

Use educational content to reinforce authority without turning the page into a medical resource.

- Display 2-3 related articles when they exist.
- Potential source topics from the client brief: Ingredient Science, Ayurveda, Dermatology, Hair Science, Lifestyle, Clinical Research.
- Article selection should come from tags/concern mapping, not be hard-coded per page.
- Do not invent doctor interviews or research articles.

Section 9 - Greenfuel Promise

Reuse the same quiet trust design language as the Shop page.

- Ayurvedic Heritage
- Ingredient Transparency
- Modern Formulation
- Thoughtful Manufacturing
- Only use claims that the client has approved.
- No unverified numerical statistics.

Section 10 - Global Footer

Reuse the global Greenfuel footer.

- Shop, Shop by Concern, Ingredients, About Us, Knowledge Centre, Contact and policy links.
- Deep forest/charcoal background, warm ivory text, minimal botanical line art.
- Keep the current navbar/footer visual system consistent.

3. Concern Explorer Interaction

The page should feel interactive without becoming technically heavy. Concern selection is simple routing/filter state, not AI analysis.

State	Behavior
Default	Show all 10 concern cards and a neutral introduction.
Hover - desktop	Image/illustration scales very slightly; title/arrow shifts a few pixels; copper accent appears.
Selected	Use a thin copper/forest emphasis and scroll smoothly to the selected concern story/results.
Deep link	Loading /shop-by-concern/hair-fall should open directly with Hair Fall selected.
Back/forward	Browser navigation should restore selected concern when URL state is used.
No results	Show a calm empty state: no matching products currently available + Browse All Products.

Concern card visual language

- Use editorial images or restrained botanical/skin/hair illustrations.
- Keep card backgrounds warm ivory/sand; individual accents can vary subtly.
- Avoid icons that resemble medical diagnosis, pathology, injury or treatment diagrams.
- Do not use bright green circles, oversized badges, glossy marketplace styling or heavy shadows.
- Do not put long explanatory paragraphs inside the card - the card is a navigation object.

4. Dynamic Data & Product Mapping

Concern-based shopping only works correctly when concerns are explicitly mapped to products. Do not infer mappings from product names or images in the frontend.

Suggested concern object

```
concern: { id, slug, name, group, // skin | hair | body shortDescription, longDescription?, heroImage?,
cardImage?, ingredientIds[], productIds[], ritualIntro?, knowledgeArticleIds[], seo: { title, description,
ogImage } }
```

Product-side mapping

```
product: { ... concernIds: [], ingredientIds: [], routinePlacement?: ["morning", "night", "weekly",
"as-needed"] }
```

- Use stable concern IDs/slugs internally.
- A product may belong to multiple concerns.
- Concern pages/results must not show unpublished products.
- If the backend does not yet support concerns, use a clean mock JSON/data adapter during frontend development and replace it later.
- Do not create AI recommendation tables or image-analysis endpoints.
- Do not store medical diagnoses or sensitive user data because this page does not need them.

5. Scroll-Triggered Animation Guidance

Use the same slow premium motion language already defined for Greenfuel. The page should feel alive but remain much lighter than an interactive diagnostic tool.

Section	Recommended animation
Hero	Headline fade-up / masked reveal; background image scale 1.03 -> 1.00.
Concern grid	One-time card stagger, about 40-70ms between cards.
Selected concern	Image/copy reveal from opposite sides with only 15-25px travel.
Ingredient journey	Botanical cards reveal left-to-right; ingredient art may drift 8-16px.
Products	Reveal by row; normal Shop product-card hover behavior.
Tradition x Science	Soft split-image parallax or two panels gently moving toward center.
Ritual timeline	Steps reveal sequentially as the section enters viewport.
Knowledge cards	Simple fade/scale; no complex pinning.
Promise	Small icon/text stagger.

- Use GSAP + ScrollTrigger only if already used by the site; otherwise IntersectionObserver/CSS is sufficient.
- Respect prefers-reduced-motion.
- Do not pin the entire concern/results area.
- Do not animate product filtering with long delays.
- Keep product/card click targets active while animations run.
- Clean up ScrollTriggers/observers on route change.

6. Responsive & Mobile Experience

Viewport	Recommended behavior
1440-1920px	5-column concern grid; wide selected-concern split section; 3-column product results.
1024-1439px	5 or 4 concern columns depending on actual card width; 3-column products.
768-1023px	3-4 concern columns; stacked/55-45 story layout; 2-3 product columns.
430-767px	2-column concern grid; stacked story; 2-column products if legible; horizontal ingredient/ritual rails.
360-429px	2 compact concern cards or 1 column if labels wrap poorly; simplified motion.

- Mobile must remain thumb-friendly and vertically readable.
- Concern cards need at least ~44px usable tap areas.
- Do not rely on hover to reveal the concern title or Explore action.
- Prevent horizontal overflow from botanical decorations.
- Scroll to the selected concern content with appropriate offset below the sticky navbar.
- If using horizontal rails, show clear partial next-card visibility or arrows/dots so swipe behavior is discoverable.

7. Suggested React Component Structure

```
ShopByConcernPage |-- ConcernHero |-- ConcernExplorer | `-- ConcernCard |-- ConcernStory |--  
ConcernIngredientJourney | `-- IngredientCard |-- ConcernProductResults | `-- ProductCard |--  
TraditionScienceMini |-- ConcernRitualTimeline |-- RelatedKnowledge |-- GreenfuelPromise `-- GlobalFooter
```

Reuse rules

- Reuse the exact global Navbar and Footer.
- Reuse ProductCard from the Shop page.
- Reuse IngredientCard/ingredient linking patterns from the Ingredient system.
- Reuse shared reveal/ScrollTrigger wrappers rather than creating page-specific animation code everywhere.
- Keep concern content in JSON/backend/admin data so the page can support new concerns later without layout changes.
- No new heavy backend service is required beyond concern-product/ingredient mappings.

8. SEO, Accessibility & QA

- Main page H1 can be 'Shop by Concern'; deep-linked concern view should have a concern-specific H1.
- Use unique meta title/description for deep-linked concern pages when content exists.
- Concern cards should be crawlable links if each concern has its own URL.
- Do not use medical structured data or diagnosis schema.
- All cards, filters, accordions and product actions must be keyboard accessible.
- Use meaningful alt text for concern visuals; decorative botanicals should use empty alt.
- Maintain readable contrast over imagery.
- No fake product recommendations, clinical claims, ratings, before/after results, or timelines.
- Test with concerns that have many products, one product, and zero products.
- Test at 360, 390, 430, 768, 1024, 1440 and 1920px.
- Confirm Shop by Concern remains highlighted correctly in the navbar.
- Confirm route change between concerns resets selected state and animation cleanly.

Final direction: Shop by Concern should feel like guided discovery, not diagnosis - a calm editorial bridge from what the visitor cares about to Greenfuel's ingredients, rituals and real mapped products.
