

Shop Page

React.js e-commerce implementation specification based on the approved Greenfuel visual direction and the current 9-product catalogue.

Visual Direction Minimal, elegant, scientific, authentically Indian.	Commerce Direction Premium browsing first, fast shopping second, no marketplace clutter.
--	--

*Important temporary rule: for any unfinished hero, category, product, concern, or ingredient visual, use any suitable dummy image already available in the local **assets** folder. Keep paths replaceable so final photography can be swapped later.*

1. Shop Page Objective

The Shop page is Greenfuel's main commercial browsing page. It must retain the brand's calm Ayurvedic-science identity while making product discovery extremely easy. Because the current catalogue is small, the page should feel curated rather than like a large marketplace.

- Show the complete current catalogue without pagination or infinite scroll.
- Use the exact 9 confirmed categories and do not invent additional category groups.
- Do not show the AI Advisor; it is intentionally excluded from the current scope.
- Do not use fake reviews, fake customer counts, unsupported certifications, or unconfirmed health/medical claims.
- Filters should be useful but lightweight because the catalogue currently contains only 9 identifiable products.
- The visual experience may be animated, but shopping interactions must remain immediate.

Recommended primary route

/shop

Confirmed categories

Hair Mask	Face Mask	Ubtan
Face Serum	Scalp Serum	Face Wash
Moisturizing Cream	Roll-On	Inhaler

Known product references

Category	Known product/reference
Hair Mask	KeshVruddhi Herbal Hair Mask
Face Mask	Shuddhi Pure Herbal Face Mask
Ubtan	Aura Ubtan Face Mask Powder
Face Serum	Eterna-AgeReset Advanced Anti-Ageing Serum
Scalp Serum	Specific product not yet supplied - keep category, do not invent product
Face Wash	Waterless Face Wash Spray
Moisturizing Cream	Sparsh Moisturizing Cream
Roll-On	Under Arm Roll On
Inhaler	Herbal Natural Inhaler

2. Exact Shop Page Layout

Section 1 - Compact Shop Hero

Keep this shorter than the homepage hero so customers reach shopping quickly.

- Eyebrow: SHOP GREENFUEL
- Main heading: Discover Your Everyday Ritual
- Supporting copy: Thoughtfully crafted Ayurvedic formulations for modern living.
- CTA: Explore Products -> scrolls to the product catalogue.
- Right side: 2-3 products styled on stone/copper/botanical surfaces.
- Height guidance: approximately 380-480px on desktop.
- Use any suitable dummy image from assets for now.

Section 2 - Shop by Category

A premium visual entry into the exact nine categories.

- Desktop: 5 items first row + 4 centered in the second row, matching the approved visual direction.
- Mobile: horizontally swipeable category rail or clean 2-column grid.
- Each item: image, category name, small Explore arrow.
- Category click filters the product grid below and should update the URL query where practical.

Section 3 - Product Toolbar

A clean toolbar immediately above the catalogue.

- Left: All Products (9) or actual backend result count.
- Right: Filter and Sort by.
- Filters: Category, Concern, Ingredient, Price.
- Sort: Featured, Newest, Price Low to High, Price High to Low.
- Avoid a permanently wide marketplace sidebar; use a refined drawer or compact panel.
- On mobile, open filters in a bottom sheet/full-height drawer.

Section 4 - Main Product Grid

Show the entire current catalogue because only nine products are involved.

- Desktop: 3 columns x 3 rows is the preferred premium layout.
- Large desktop may use 4 columns only if card width still feels luxurious.
- Tablet: 2-3 columns depending on available width.
- Mobile: 2 columns if legible, otherwise 1 column on very narrow screens.
- No pagination, no infinite scroll, no Load More for the current 9-product catalogue.

Section 5 - Shop by Concern

Break the product catalogue with an editorial discovery section so the page does not become a plain grid.

- Skin Brightening
- Hair Fall
- Pigmentation
- Anti-Ageing
- Hydration
- Dandruff
- Body Odour
- Dry Skin
- Sensitive Skin
- Dark Circles
- Use clean botanical/lifestyle icons or imagery; avoid a clinical diagnosis appearance.
- Clicking a concern applies the concern filter and returns focus to the product catalogue.

Section 6 - Botanical Intelligence

Use a deep forest-green editorial strip to connect shopping with Greenfuel's ingredient philosophy.

- Show 5 featured ingredients initially: Bhringraj, Bakuchiol, Saffron, Neem, Tulsi.
- Each ingredient card can show name + very short role/origin metadata when confirmed.
- Link to the ingredient page or filter products containing that ingredient.
- Do not add heavy 3D herbarium functionality on this Shop page.

Section 7 - Greenfuel Promise

A concise trust section before the footer.

- Ayurvedic Heritage
- Ingredient Transparency
- Modern Formulation
- Thoughtful Manufacturing
- Use simple line icons and short text.
- Avoid unsupported claims or numerical statistics.

Section 8 - Global Footer

Reuse the same global premium footer as the rest of the site.

- Deep forest/charcoal background.
- Links: Shop, Shop by Concern, Ingredients, About Us, Knowledge Centre, Contact, Policies.
- Greenfuel Circle/newsletter may remain a quiet footer element.
- No sale banners or popup capture.

3. Product Card Specification

The card should be image-led, calm and useful. All important commerce information must be available without hover on mobile.

Element	Implementation rule
Product image	Use backend/local product image. Temporary missing imagery may use a suitable local dummy asset.
Category label	Small uppercase or restrained sans-serif label.
Product name	Exact backend product name; maximum 2 lines.
Short descriptor	Optional one-line ingredient/ritual descriptor only when actual content exists.
Price	Use backend price. Do not use prices seen in marketing creatives unless confirmed.
Wishlist	Outline heart, connected to existing wishlist logic.
Add to Cart	Visible primary action. Preserve stock/variant validation.
Badges	Only real states such as New, Out of Stock, Bestseller if actually supplied by backend/admin.
Ratings	Do not show unless real review data exists.

Hover behavior

- Subtle product image scale around 1.02-1.04 maximum.
- Optional second image crossfade if available.
- Wishlist opacity/reveal can become stronger.
- Add to Cart may slide up gently on desktop.
- No large card lift, neon glow, bounce, or aggressive 3D motion.

4. Filter and Sort Behavior

Filter	Values / source
Category	Exactly the 9 confirmed categories.
Concern	Skin Brightening, Hair Fall, Pigmentation, Anti-Ageing, Hydration, Dandruff, Body Odour, Dry Skin, Sensitive Skin, Dar
Ingredient	Populate dynamically from actual product ingredient data.
Price	Use current backend price range.

- Selected filters should remain visible as removable chips.
- Changing one filter must preserve the others.
- Use URL query state where practical, e.g. /shop?category=ubtan.
- Clear All resets only shop filters, not cart/wishlist/auth state.
- Empty result state should offer Clear Filters and return to all products.

5. Scroll-Triggered Animation Guidance

Area	Animation guidance
Hero	Headline fade/translate; product composition moves 8-18px with slow parallax.
Categories	One-time stagger reveal; 40-70ms between items.
Toolbar	Sticky-state background/blur transition only.
Product grid	Reveal by row: opacity 0->1 and translateY 12-18px->0.
Product hover	Small scale/crossfade; no scroll-trigger requirement.
Shop by Concern	Gentle masked reveal or horizontal drift.
Botanical Intelligence	Cards reveal left-to-right; botanicals may drift slightly with scroll.
Promise	Short icon/text stagger.

- Use GSAP + ScrollTrigger only if already part of the project; otherwise IntersectionObserver/CSS is acceptable.
- Respect prefers-reduced-motion.
- Animate transform and opacity where possible.
- Do not pin the product grid.
- Do not create a ScrollTrigger for every small icon; group reveals.
- Clean up observers/ScrollTriggers on unmount.
- Animations must never delay filtering, sorting, add-to-cart, or navigation.

6. Responsive Behavior

Viewport	Recommended behavior
1440-1920px	3-column premium grid preferred; 4 columns optional if card width remains generous.
1024-1439px	3 columns; category rail may reduce spacing.
768-1023px	2-3 columns; category swipe; filter drawer.
430-767px	2 columns if readable; mobile filter/sort sheets.
360-429px	2 compact columns or 1 column if actual names/prices become cramped.

- Tap targets should be at least about 44px.
- Do not hide price/Add to Cart behind hover on touch devices.
- Lock body scroll when mobile filter drawer is open.
- Keep image aspect ratios stable to prevent layout shift.
- Test long product names and missing images, not only perfect demo data.

7. Suggested React Component Structure

```
ShopPage
|-- ShopHero
|-- ShopCategoryGrid
|-- ShopToolbar
| |-- FilterButton / FilterDrawer
| |-- ActiveFilterChips
| `-- SortSelect
|-- ProductGrid
| `-- ProductCard
|-- ConcernDiscovery
|-- BotanicalIntelligence
|-- GreenfuelPromise
`-- GlobalFooter
```

Data integration rules

- Do not hard-code the full catalogue in JSX if a product API/backend already exists.
- Preserve current cart, wishlist, authentication, stock, tax, pricing, and checkout behavior.
- Use stable category/concern/ingredient slugs or IDs internally.
- Do not alter backend schema unless required; prefer adapting the UI to existing data.
- If APIs are not ready, use a clearly separated mock/local data adapter so it can later be replaced cleanly.

8. Temporary Asset, SEO and QA Rules

Temporary image guidance

- Use suitable dummy images from the local assets folder only for unfinished visuals.
- Do not overwrite original brand/product assets.
- Centralize paths or product image data so replacement is easy.
- Use meaningful alt text based on the represented content.
- Test object-fit/object-position on mobile.

SEO/accessibility

- One clear H1 for the Shop page.
- Category and concern links should be real navigable links where possible.
- Product cards should link to product detail routes using crawlable anchors.
- Use semantic nav, button, form, label, select, and heading elements.
- Filter drawer must be keyboard accessible; Escape closes it and focus returns to the trigger.
- Do not render hidden duplicate product text solely for SEO.

Final QA checklist

- Header and Shop dropdown work on desktop/mobile.
- Exactly 9 confirmed categories are shown.
- AI Advisor is not present.
- Product grid loads real/demo data without crashes.
- Filter state persists correctly.
- Sort changes only product ordering.
- Wishlist and Add to Cart work.
- No invented prices/ratings/claims appear.
- No horizontal overflow at 360px, 390px, 430px, 768px, 1024px, 1440px and 1920px.
- Scroll animations do not block commerce interactions.
- All temporary images come from assets and are easy to replace.

Final implementation principle: the Shop page should feel like a curated Greenfuel ritual library - not a crowded marketplace. Keep the commerce direct, the imagery refined, and the motion slow.
